# Account.Third-party Auth

1, **2**   The Client must Sign-in on the Third-party Authentication Server with read access:
- **email** *required*
- user_pic, etc.

3   Send from Client to Nevis Backend server `Identity Check Data + account data`, received from Third-party Authentication server

4   STAGE 1 — Check the fact of Sign-in on the Third-party Authentication Server
by the use `Identity Check Data`

STAGE 2 — Prepare the Nevis Account before Sign-in to it:
if Nevis Account exists, then *change* password
else create new Nevis Account with *generated* password

STAGE 3 — Perform Sign-in on the Nevis Backend Server using: <u>email</u>, <u>new password</u>

5   Forward the Sign-in Result on the Nevis Backend Server to the Client
